### WINDOWS GUI POWERS SUPPLY CHAIN APPLICATIONS

*BEC's latest development delivers the power of the Windows GUI to the supply chain. Already implemented by several customers, this user-friendly solution is intuitive and versatile.*

BEC's latest development delivers the power of the Windows GUI to the supply chain. Already implemented by several customers, this user-friendly solution is intuitive and versatile.

The aesthetic mix of icons and menu options available in the Windows Interface ensures the smooth operation of data capture terminals and reduced training. End Users can efficiently navigate transactions, view reports and even capture customer signatures.

The solution utilises hand held devices running Windows Mobile or CE. Transactions are conducted via the graphical user interface and the terminals operated using a touch-screen or keypad.

Data is transmitted in real time across a range of networks including WLAN, LAN and GPRS. Where communications are unavailable, the terminals provide an Offline Work facility, enabling data to be stored locally until a connection is re-established.

The system comes with an integrated help system and web-based Management Tools, allowing performance measurement reports to be generated and viewed instantly.

Requiring no modification to the existing system, BEC's Windows solution integrates seamlessly into host MRP and ERP systems. Transactions are currently available for Warehouse, Service/Maintenance and Delivery applications, with further Windows functionality available shortly for Shop Floor Data Capture.

Designed to be backward compatible with older data capture systems, Windows capabilities are available as upgrades.
