

**SPECIALISTS IN  
DATA CAPTURE**  
BEC SYSTEMS INTEGRATION

# BEC NEWS

Autumn 07

## HIGHLIGHTS THIS ISSUE

1. Integration of the World's most reliable robot
2. More Help Maximising your Business Potential
3. Win an iPod Shuffle

## Windows format powers Supply Chain Applications

With Windows being used on a wide scale at home and in the office, why not make life easier on your staff by introducing it to the shop-floor. Choose Windows format for an intuitive, easy to use data capture system.

BEC's latest development delivers the power of the Graphical User Interface (GUI) to supply chain applications. Benefiting from the familiarity of Windows, your staff can efficiently navigate transaction screens, view reports and even capture signatures. You will even reduce your training requirements.

Utilising devices running Windows Mobile or CE, the terminals can be operated using a touch-screen or keypad.

Already implemented at several customer sites, the solution has transactions for a range of applications with more to be released shortly.

To read more, visit the News section of BEC's website at: [www.becsi.co.uk](http://www.becsi.co.uk) or email [info@becsi.co.uk](mailto:info@becsi.co.uk) to find out about available transactions and upgrade opportunities.

## Voice-Directed Technology drives IDB Deutschland's new Finished Goods Warehouse

IDB Deutschland GmbH extends its butter formation and packaging operations in its brand new factory. Venturing for the first time into Finished Goods, Voice-Directed Technology ensures IDB get it right from the outset.

When IDB took the decision to build a new factory, they knew they had the opportunity to capitalise on the business potential. Aiming to maximise efficiency, productivity and profitability across all operations, IDB needed a future proof solution.

With the prospect of making significant cost savings and no prior experience in Finished Goods, IDB called in BEC to guide and advise them along the way.

BEC's cost-effective solution integrates seamlessly into M3 (formerly Intenia Movex) and provides real-time updates of all transactions.

The latest Voice-Directed Technology gives IDB a rapid ROI and pick accuracy rates of 99.9%.

## Integration of the World's most reliable robot

The Fanuc robot achieves 99.9% uptime, but it can't ensure your production schedule is correct. Until now!

Used for any shop floor application, ranging from Assembly to Product Formation and Packaging, your Fanuc Robot can now deliver immediate visibility of production data, thanks to integration specialists, BEC.

Directly linking your shop-floor and data capture system, BEC's solution uses fixed scanners to sense and identify items on the production line. The scanned data is transmitted to the host for verification against the current production run.

Assured the correct product is processed each time, you will reduce stock wastage, maintain product quality & consistency and improve customer relations. The automatic issuing of raw materials to production increases stock handling efficiency and frees up labour resources previously used to check schedule accuracy.

To find out more about integrating your Shop Floor equipment and data capture system, Contact BEC on +44 (0) 1254 688 088 or email [info@becsi.co.uk](mailto:info@becsi.co.uk).

## Win an iPod Shuffle

For your chance to win an iPod, correctly answer our puzzle.

The iPod Shuffle stores up to 240 of your favourite songs and provides 12 hours of music. Compact and wearable, you'll be able to take it anywhere, even on business trips!

Details on how to enter the competition can be found at our website: [www.becsi.co.uk](http://www.becsi.co.uk).

## More Help Maximising Your Business Potential

To meet the growing needs of customers keen to get the latest benefits from data capture, Paul Wilkes has come on board as our new Business Development Manager.

Paul has over 17 years experience in the design and implementation of mobile data capture solutions for the manufacturing and retail industries.

With an in-depth knowledge and understanding of stock control, supply chain management and logistics, Paul will be a fundamental part of BEC delivering first class customer services and expertise.

He comments "BEC has an enviable reputation in the field of systems integration. I firmly believe the way is open for us to dramatically develop our mobile product offerings to our customer base and I am eagerly looking forward to being part of that growth."

To learn how automated data capture can benefit your organisation, contact BEC on: +44 (0) 1254 688 088.

## Another way to get in touch...

Calling from a landline within the UK? You can now get in contact with BEC using our new local rate telephone number: 0845 643 0588

For all other calls, telephone us on: +44 (0) 1254 688 088

## About BEC

BEC (Systems Integration) Ltd are specialist providers of Automated Data Capture Solutions.

With access to a range of the latest data collection technologies, BEC advises, designs and delivers solutions that integrate seamlessly into host systems.

Working in the manufacturing, engineering and food & beverage industries, BEC's supply chain solutions improve productivity, efficiency and profitability.
