CELEBRATING 10 YEARS OF DATA CAPTURE FOR MOVEX/M3

Leading supplier of data capture systems celebrates 10 years integrating static, mobile and out-of-premise solutions into Movex/M3. Controlling all aspects of inventory and shop floor data capture from receipt to final delivery, the innovative solutions streamline operations, maximise accuracy, efficiency and productivity.

Lancashire, October 2008 - BEC (Systems Integration) Ltd, a specialist provider of Automated Data Capture solutions, is celebrating 10 years of data capture integration into Movex/M3.

BEC's flagship product, SIGMA is a mature solution developed over a number of years to complement ERP systems. Providing advanced automated data capture functionality for Movex/M3, SIGMA acts as a direct link between the host and shop floor operations.

The utilisation of the latest data collection hardware eliminates human errors and increases data integrity. With real-time validation against Movex/M3, decision makers are assured that the information they are using is accurate, reliable and up-to-date.

BEC's SIGMA product has Automated Data Capture modules for the following supply chain applications:

Voice - Harness the power & flexibility of speech recognition to increase the productivity of warehouse operatives. Voice technology provides a safe, hands-free, eyes-free method of data capture.

Warehouse Management - Provide real-time validation of all warehouse operations, enabling management to make reliable decisions based on accurate stock levels. Operators can use Voice Directed technology or conventional hand held & vehicle mounted terminals.

Shop Floor Data Capture - Capture real-time data on operations, processes & job data. Integrates shop floor machinery and allows Movex/M3 to control inventory & production information.

High Speed Vision Systems - Check products and packaging are consistent with the production run and ensures they conform to legislative & customer requirements.

Electronic Proof of Delivery - Eliminate disputed deliveries with accurate real time collection of data at the point of delivery.

Offering the complete package from initial consultation & feasibility study, through to design & implementation with a total commitment to post sale support and customer satisfaction, BEC's integration expertise gives additional strength to, and extends the capabilities of Movex/M3.

Tony Hampson, Operations Director of BEC (Systems Integration) Ltd said *"BEC has been dedicated to delivering a powerful, robust data capture solution for Movex/M3 from the outset and our commitment has certainly paid off."* He continues: *"It is an honour that the BEC team has rapidly become renowned amongst the Movex User community for our data capture capabilities and as the partner you can trust to support the whole system."*

ABOUT BEC

BEC (Systems Integration) Ltd are specialist providers of Automated Data Capture Solutions.

With access to a range of the latest data collection technologies, BEC advises, designs and delivers solutions that integrate seamlessly into host systems.

Working in the manufacturing, engineering and food & beverage industries, BEC's supply chain solutions improve productivity, efficiency and profitability.
