

eSmart® Warehouse

Increase Accuracy, Productivity & Visibility

With increasing pressure from customers, competition and lower margins, you need full, real-time and effective control of your inventory. Without it, it can be increasingly challenging to meet customer orders, plan production or even rotate stock effectively.

BEC's **eSmart® Warehouse** solution automates business operations, streamlining processes and maximising throughput, whilst driving down costs. So whether you want to maximise the efficiency of your supply chain, from manufacturing through to the consumer, or achieve a better handle on stock control, look no further than the **eSmart® Warehouse** from BEC.

Designed to seamlessly integrate into your existing ERP / Business System, **eSmart® Warehouse** delivers tangible business benefits. Providing accurate, traceable information on all of your warehouse processes as well as additional support for performance monitoring, BEC's data capture system improves productivity and helps you respond quickly and effectively to customer enquiries - in real-time.

Automate key warehouse processes including:

- *Goods Receipting*
- *Putaway*
- *Putaway Split*
- *Location Enquiry*
- *Lot Enquiry*
- *Replenishment*
- *Stock Movement*
- *Picking*
- *Wave Picking*
- *Pick to Marshalling*
- *Stock Adjustments*
- *Reclassification*
- *Stock Counting*
- *Packing*
- *Quality Checks*
- *Dispatch*
- *Courier Integration*

- Reduce need for surplus inventory with full stock visibility
- Support for multiple warehouses
- Integration of automation equipment

The **eSmart® Warehouse** uses rugged data capture technology to automate key warehouse processes and capture transaction information.

When coupled with BEC's technology expertise and data capture software, the **eSmart® Warehouse** provides you with a truly end-to-end solution that covers infrastructure (wired and wireless), data capture hardware and client/server software.

RF Data Capture

- Improved accuracy via removal of manual data re-entry.
- Improved productivity - tasks are completed faster and manual preparation of paperwork is removed.
- Improved customer services - be able to tell customers in real-time, where their order is in the process.
- Perform stock enquiries anywhere in real-time with improved visibility of inventory.

202-M04

The **eSmart® data capture** solution also supports voice capabilities that offer you further improvements in productivity and accuracy.

Voice Directed Warehouse

- Picking productivity typically improves a further 10-25% above paper-based picking.
- Hands and eyes free operation improves safety and eliminates repetitive strain issues.
- Suitable for a range of applications including picking, stock cycle count, goods in, put away, real-time stock updates.
- Enables performance monitoring of efficiency, utilisation and productivity of individual operatives.
- Versatile and durable hardware, supports changing language settings and environments including freezers.
- Rugged hardware design reduces damage.
- Minimal Training required with easy to use technology.
- Seasonal worker benefit, supports picking to standard rate - in as little as 2 days.
